Ontology Description

My ontology is about the film *Inglourious Basterds*. I listed all of the characters in the film under subclass 'Characters'. The 'Allegiances' subclass lists the three groups in the film that the characters could potentially be aligned with. The 'Nationality' subclass lists the different countries that the characters are potentially from. I also made 'Character Type' a subclass to indicate if a character is a main or secondary character. My last subclass is 'Title' where I listed the various ranks and titles of the characters in the film. In the 'Characters' subclass, I then used Object Properties to show the different relationships the characters had between the other subclasses. Each term has a textual definition in the annotations, while the characters additionally have annotations to indicate the actor that played them, their fate in the film and a reference link to the *Inglourious Basterds* wiki I referred to.
